

Operations Manual

Endurance Pro X2 - Dual Heat Semi-automatic Dough Press
Model #: DP2010PID

PROLUXE
WWW.PROLUXE.COM

Congratulations!

Your selection of the Proluxe DP2010 is a sound business decision. Whether your intended use is to press or par bake dough for pizzas, tortillas, mushi skins or other appropriate dough products, rest assured that you have made a wise choice.

Proluxe equipment is a result of the highest quality engineering and time-tested design. Your machine, combined with Proluxe's reputation of innovation in dough press equipment manufacturing, insures the continuing capability of delivering the best-decorated product possible.

This manual describes installation, operation, and maintenance procedures for your new model DP2010.

Your model DP2010 machine will have a long trouble-free life. Read this manual carefully and keep it with your machine; it's your key to proper operation and lasting service.

Included with your shipment:

- 5 Rubber Feet
- Platen Saver **If your unit has polished platens**

Installation

DOMESTIC

Use a separate 30 amp AC circuit. Only industrial extension cords with proper wire size should be used; size 16/3 wire for distance up to 25 feet, and size 14/3 for distance up to 50 feet.

INTERNATIONAL

Use a designated 30 amp AC circuit. Only industrial extension cords with proper wire size (2.5 sq. mm) shall be used.

Make sure there is a proper electrical wall outlet located within reach of the cord and plug attached to the press. Then place the press in an area that allows for "swing clearance". Note that the upper platen rotates up to 90°, in a backward rotation, to facilitate removal of the dough product after the press cycle has been completed. Also note that the machine requires a vertical, clear space of 33" from the bottom of the machine to the top of the pull handle.

Limited Machine Warranty

Proluxe warrants this dough press machine, when operated under normal conditions, to be free from manufacturing defects in material and workmanship for a period of one year on parts and labor from the invoice date.

This warranty will be effective only when Proluxe authorizes the original purchaser to return the product to the Factory in Perris, California

prepaid and only when the product, upon examination, has proven to be defective.

This warranty does not apply to any machine that has been subjected to misuse, negligence or accident.

Proluxe shall not be liable for the injury, loss or damage, direct or consequential, arising out of the use or the inability to use the product.

No claim of any kind shall be greater in amount than the sale price of the product or part to which claim is made.

This is the sole warranty given by the company, it is in lieu of any other warranties, expressed or implied, in law or in fact, including the warranties of merchantability and fitness for a particular use, and is accepted such by the purchaser in taking delivery of this product.

Specifications

Electrical:

208V/50-60Hz/4600W/22.11Amps

Requires 30 AMP outlet

Includes 72" NEMA 6-30P approved cord and plug.

Shipping Weight:

180lbs. (82kg)

Familiarize yourself with controls and operating mechanisms before attempting to use the DP2010. These are as follows:

- (A) Pull Pressing Handle for raising and lowering the upper platen. This action forces the mating of the platens.
- (B) Lock release
- (C) On/Off Button. The green light above the button will illuminate when turned on to indicate power is in the press.
- (D) Control Panel (*see Control Board Operations*)
- (E) Handle for swing-out platen.
- (F) Upper platen
- (G) Lower platen

WARNING

In case of power cord damage, do not attempt to repair or replace the power cord. Contact the manufacturer or the local distributor.

WARNING

Avoid touching hot surfaces while operating the machine.

CAUTION

During normal operation, the base of the machine must be installed or placed above the wall socket.

CAUTION

When servicing or cleaning the machine, make sure that the power cord is removed from the wall socket.

Control Board Operations

Solid State Controller

This controller has three (3) control features:

1. Temperature – Temperature may be set from 0°-450°F (0°-232°C). The factory default setting is 240°. If you would like to change this setting, simply follow the *Controller Operation* directions.

2. Counter – Cycle counter counts the number of applications from 1 to 9999 (*see additional Notes – Counter*).
3. Timer – A timer mode is available upon special request. If you would like to have the timer function installed, please call 1-800-624-6717

Controller Operation

Temperature Control

1. Press the **MODE** button until temperature is displayed.
2. Push and hold **SET** button and simultaneously push UP (▲) or DOWN (▼) arrow buttons to the desired temperature setting.

For the DP2000, both the upper and lower platens may be set to different temperatures.

- *Upper Platen:* Simply push the **MODE** button until the “upper” light is illuminated. Adjust the temperature as noted above.
- *Lower platen:* Simply push the **MODE** button until the “lower” light is illuminated. Adjust the temperature as noted above.

Dough Pressing Operations

SETTING CRUST THICKNESS CONTROL:

*The thickness is determined by dough weight and temperature setting on each platen.

<i>Dough Product</i>	Press Only		Press & Par Bake	
	<i>Temp</i>	<i>Press Time</i>	<i>Temp</i>	<i>Press Time</i>
Pizza	150°F both platens	3 seconds	325°F both platens	7-15 seconds
Flour Tortilla	N/A		350°F both platens	1 quick second
Corn Tortilla	No heat, must use wax paper	3 seconds	N/A	
Mushi Skin	150°F both platens	3 seconds	N/A	

****To achieve consistent size flour tortillas of smaller than 10” you will need to only press 2 at a time as shown in the pictures included with the manual.***

Note: Keep in mind that dough formulations may differ, and that you may have to do some trial and error testing of different temperatures and platen pressure to arrive at the proper end result for your particular product.

Also note that the finished, after-pressing diameter of the finished dough piece is determined by the weight of the dough and the amount of pressure applied to the platens.

For best results, your dough should be proofed at room temperature before pressing, but it will also press directly out of your refrigerator. **Flour is not required to press a crust and should not be dusted on any part of the machine.**

PRESSING DOUGH:

1. First make sure you have the correct type electrical current or serious damage could occur!
2. Press the Power Button in order to turn the machine on. A green light will illuminate above the power button indicating that power is in the machine.
3. Both the upper and lower platens will heat up once you have adjusted your digital control to your desired setting. *Note: Different products require different temperature settings. In order to determine the right temperature setting for your product, refer to the following table simply as a guide for starting.*

ADDITIONAL NOTES:

Temperature

No. DPPC1. (See our catalog and price list for information.)

*Note: This spray **will not** affect the taste of your crust in any way.*

- Place your pre-portioned ball of dough in the approximate center of the lower platen. Add another dash of spray to the top of the dough ball.

- Close the platen and pull the “U” shaped handle down to commence the pressing operation.

- Press the handle down until the magnet has activated for the appropriate amount of time for your particular product and then the handle lock will release once the time has completed.

.....dwwqp"qp"vj g"ltqpv"qh"vj g"o cej kpg"y kni'

.....f kugpi ci g"vj g"o ci gv'r tkqt"vq"vj g"vko gt

.....gzr ktpi 0

- Remove the finished product by rotating the upper platen out of the way until you have sufficient space to do so. Place the dough on a screen or in a pan. Since the shape of the dough may be altered slightly in the transfer process, some hand fitting may be required. Add toppings, if desired, and now you are ready to bake.

Note

Fahrenheit/Centigrade (Celsius) Conversion

The temperature controller can be programmed to display either °F or °C. To change: Press the **MODE** button until the temperature is displayed, then push and hold the **SET** button for 10 seconds.

Counter

The controller has a built in cycle counter.

- Press MODE button until the counter is displayed.
- Counter display range is 0000 to 9999.
- To reset the cycle counter, display the counter reading, then push and hold both UP (▲) and DOWN (▼) arrow buttons for 3 seconds until the counter resets to zero (0000) on the display.

!Warning!

Forcing the handle up while engaged to the magnet will cause damage and is not covered under warranty.

To release the handle before the time has expired, press the black release button located right of the control.

Preventative Maintenance Suggestions

The Proluxe DP2010 machines are relatively maintenance free. For a long and trouble-free life, the following preventative maintenance should be followed:

Daily Care:

1. **Platens:** These platens should *only* be cleaned with mild soap and warm water then wiped off with a clean, soft cloth or soft sponge. **Never use steel wool or harsh abrasives or you will cause costly damage.**
2. **All other exterior surfaces:** Here again a daily wipe down with mild soap and warm water will do the job quite nicely. **Never use steel wool or harsh abrasives or you will cause costly damage.**

DOUGHPRO DP2000 Trouble Shooting Guide

Symptom	Probable Cause	Action to be Taken
Power Button on Digital Controller face is depressed but doesn't turn on.	Power Cord is not plugged in.	Plug power cord into wall 's receptacle and depress power button on controller
	Circuit Breaker is tripped off in the site's breaker box	Reset circuit breaker that the Grill is plugged into. Depress Power Button to turn on.
	Transformer has taken a electrical surge and is damaged	Replace Transformer after you check secondary side of transformer. If working properly, you should receive 12vdc.
	Check voltage on the secondary side of the Transformer. If you read 12VDC then you are receiving voltage to the Controller.	Replace Controller. Controller should be on once the power button is depressed.
	Possibly blown Fuse	Replace fuse.
Digital Controller's LED's are scrambled or randomly erratic. If when turning on, the display will first go to segment check	Possibly a componet on the Digital Controller is damaged	Replace Digital Controller
	Possibly control needs to reset	While unit is on (controller lit up) Unplug unit, wait for 1 min. then plug machine on and depress power button.
Digital Controller on startup goes through LED segment check (8888) then to version # and then loops back to to the above reboot.	The relay driver on the digital control may be blown.	Replace Digital Controller.
Digital display shows PROB. No heat on Upper Platen or Lower Platen.	Sensor lost it's continuity as shown on a muti-meter.	Disconnect prob that is open (no continuity as shown on a multi-meter. Must replace Sensor (RTD). Do not cut and splice new sensor. Install new 2000 ohm RTD sensor to under side of Heat Platen and reconnect to Controller.
When depressing the tactile button on Digital Controller, nothing happens.	The tactile buttons under the overlay may be not close enough to activate. Same goes if the buttons are already pressed by overlay without depressing button.	Carefully (no too much at one time to avoid fracturing the traces on the Controller) tighten the nuts on the back of the Controller until button activate. Same goes in reverse if buttons are held down by the overlay.
Digital display shows Relay and Particular zone is over heating or outer zone).	The Relay on the switched side is not opening to regulate temperature.	Replace the Relay.
Beeper not functioning or intermitten beeper sound.	Beeper on Digital Control board failed.	Replace Digital Controller board
If setpoint is reached but slighty off in temperature.	Offset may need to be calibrated and adjusted.	Must call (800) 624-6717 for confidential instructions.

DOUGHPRO DP2000 Trouble Shooting Guide

Symptom	Probable Cause	Action to be Taken
Heater Platen overheating	If the Relay (depending the year of the model) on the coil side are receiving 12vdc indicates the Controller is functioning properly. On the switching side of the relay, is there 120 vac going to the heater in question . If there is no voltage on the to the switching side of the relay to the heaters, the Relay is not working properly. It has been seen on remote cases, the Sensor (2M ohm) can give a false reading as well.	Replace Relay If the Controller's heat-on LED is not lit indicating the controller is working properly. If this is not the issue, replace sensor.
Dough not having same thickness across the press dough.	To adjust upper platen for level press	Underneath the arm resting on the Upper Platen Shroud you will find 4, stacked hex bolts sitting over the upper platen attach to the arm. The top bolts are called locking bolts. The 4 larger Hex Bolts below are Adjustment Bolts. Break free the 4 Locking blts. With a open end wrench adjust the A. bolts (1/8 turn at a time where needed and test with dough. After satisfied, tighten the Locking bolts making sure not to move the larger Adustment Bolts.

PROLUXE

Warranty & Return Policy

Proluxe warrants all products manufactured by it against defects in workmanship or materials from the date of purchase for a period of (1) year on parts and labor. **This warranty applies to only equipment purchased and used in the United States.** Warranty period shall begin when equipment ships.
